

ELEMENTS USICAL SCIENCE.
'cive parallel lines, with their four spaces, are called a staff or stee. The distand whes to spaces, and from spaces to lines, are called degreks.
To the nine degrees of the staff, are annexed the spaces cbove andelow; and short lines are added, when notes ascend or descend beyond them.
When more than one staff is wanted, they are connected by a brice, and are th the ecore.

The different parts of a score are designated by characters calleddefs, which re letters $F, C$, and $G$.

The G clef is set on the second line of the staff, for treble; the C lef on the 4 counser; and the F clef on the fourth line, for base.
The letters are applied to the staff in the three clefs as follows :
F. CLEF.

G. CLEF.

QUPTIIONS.

The clefs are set on different lines, that each pirt may bo writted staff. The ( $x$ clef is commonly used for tonour, in modern bouks; the C is nuch used. It may be placed on any une of the stan, a sed by its ines used to bring down the high notes of the base, and on the fourth line.

The indiscriminate use of the G Clef for Trebld Alto and $T$ of the pars, yet it has some advantages, and the actie eome gencal. It should bo known therefore, that be performed an octave lower than it stands tave higher than i
letters in Preble.

## RECIMATIONV.

OF TIME, MOVEMENT, MEASURE, ACCENT, \&c.

Time, is that quality, from which arises much of the pleasure we receive from sounds. Its application to musick may be explained by movement and measurc.
Movement relates to the slowness or rapidity of a piece: Measure, to the regularity of progression by equal spaces of time.
There are two species of simple measure : common or equal time, and triple or unequal time : and bv the union of two or more measures of simple time, another variety is produced, which is called compound time.

The species and their varieties, are distinguished by appropriate signs.
The three varieties of common time, are marked by the semicircle? the barred semicircle $\frac{\overline{8}}{\text { 平 }}$ and the figures $\frac{\bar{\pi}}{\frac{\pi}{4}}$ The varieties of triple time, by the figures

$$
\begin{aligned}
& =\frac{3}{3}= \\
& =\frac{3}{3}= \\
& =2=41
\end{aligned}
$$

and

In compound time, the three principal varieties are marked by the figures
$72=$
-8=

The semibrief is the measure note of the first and second raricties of common time, and the minum of the third.

In triple time, three minums fill a measure in the first, three crotchers in the second, and three quavers in the third variety.
In the first variety of sompound time, six crotchets fill a measure ; six quavers in the second, and twelve quavers in the third. Nine crotebets, nine quavers, and nin semiquavers, are the measures of other varieties, which are performed fith three beats to each measure.

The first variety fommon time bas four beats to a measure; the second and third hadetwo ; in triple time each variety has three beats to a measure, and compund time is performed with two.
The principal an most important accent, in all the varieties of time, falls on the first no of each measure, and is always accompanied by the downward beat.

measure time with cxactness and ease. The attention of the performer is arrested and for some time entertained, hy the regular return of those divisions by accent, which it soon learne to anticipate, and on $w$ hich it leans for support.
Common Time Measure consists of two equal parts, the accent on the first. When the measures are subdivided, the accent will fall on tho first and third-fifth and seven th nutes. The slurring or grouping of notes, however, reduces the number of arcents. Thus, if a measure of four crotchets are tied by pairs, they correspond to a simple measure of two parts, and must be accented accordingly: tho same is to be understood of all other kinds of notes. In performance, the second note of each couplet (in notcs of oqual length) is made something shorter than its true time.
Triple Time Measurfe consists of three equal parts, the first of which only is accented. This distinetion forms the only difference in the efferts of common and triple time. In triple time the English make a weak accent on the third part of the measure. The Germans make the second and third parts both unaccented. In con, ound measure, the former make the accent which oceurs at the middle of the rneasure equal to that which follows the bar; thus, a ineasine of compound time would not differ in its character or effert from two measures of simple time, of which it is cumposed; while the latter make it to differ both in character and effect, by marking the heginning of each compound measure, os its simplo measure, with a stronger accent than is used in the middle: a distinction which we consider of great importance, and therefore give the preference to the German theory.
Compound Measures are divided into compound common, and compound triple time. When two measures of three crotchets, or of three quavers, are united hy the omission of a bar, the time is called compound common-comnon, because every measure is equally divided; and conipound, because each half is a simple measure of triple time.
Compound Triple Tme is formed by dividing the three parts of a measure of simple triple into nine parts. The accents of the compound measures correspond with those of the simple measures of which they are composed ; yet the first aceent after the har, as in a simplo measure, should be more powcrful than those which take place in the other parts of the measure.
In Compound Common Time, when performed slow, each part will require a beat; but if sung rapidly, each triplet only will require a beat. In compound triple time, three beate (owe sung rapidly, each triplet onl
to each triplet) are required.

## RECITATION VI.

Small notes, which are supernumerary in the measure, borrow their time from the note that follows them, and are called Appoggiaturas. -After-notes are similar in form, but they borrow their time from the note which precedes them. Appoggiaturas occur on the strong, and Afternotes on the weal part of a measure.

Notes which interfere with the natural accent of the measure, are called Notes of Syncopation. Dots over notes indicate a detached manner of performance, with a small degree of emphasis.

When a passage is to be increased from soft to loud, it is indicated by an Angle, the lines extending to the right. $\qquad$ - A contrary effect is indicated by extending to the left. Sinall marks set over single notes, have the same definition $=$ When they are united, $\longrightarrow$ an increase and diminution of roice are indicated.

- The Pause or Hold, © when used as a mark of expression, is very indefinite; and the judgement of the performer must be exercised with respect to prolonging, suspending, increasing, and diminishing the sound; the heat, however, is always suspended by the hold.
A rapid, alternate repetition of the note ahove, with the note marked, and ending with a turn on the note helow, is called a Trill, or Shake. A series of sounds, which contain five tones and two semitones, or the extreme notes of such series, are termed an Octave.
Parts are in unison when the notes stand on that degree of the staff which produces the same sound. Writing, or performing the same melody, on different degrees of the staff, is called Transposition.There are twelve transpositions of the diatonick scale; six with flats, and six with sharps.
Two successive chords which produce a satisfaction to the ear, form a Cadence in musick. Cadenza, or cadence ad libitum, is an extempore passage, introduced by a solo performer, immediately preceding the last note of a period or final cadence.

## QUESTIONS.

What are the small notes called which borrow their time from the note that follows then ? When they borrow time from the note preceding, what called? Do appoggiaturas occur on the strong or weak part of the measure? Where do ofter-notes occur? What are those nows called which interfere with the natural accent? What is indicated by dots over notes? When a passage is to be increased from soft to loud, what mark? Which way should the lines extend? When extended to the left, what indicated? What is used for single notes? When a note is to be increased and diminished, how marked? Is tho expression indicatcd by the pause or hold definite? In such cases, how is the beat regulated? What is a rapid, alternate repetition of two contiguous notes called? What is a series of eight notes, or their extremes, called? What is a unison? What is the writing of the same melody on different degrees of the staff called? How many transpositions of the diatonick scale? When a sucgress of the starf called? hat many transpositions of the diatonick scale? When a sur-
cession of chords produce a satisfaction, what called? When an extempore passage is inlrocession of chords produce a s
duced before a close, what?

## EXAMPLES.

THE TRILL

The accent is sometimes placed upon the note above the marked one.
Various other graces, such as the Mordente, the Turn, inverted Turn, Turn on the dotied note, Beat, Passing Shake, \&cc. \&cc. are occasionally introduced in secular musick, but have no place in the musick of the church.

> Syncopation. Cadenza written. May be sung thus.

ELEMENTS OF MUSICAL SCIENCE

## Appoggiaturas as written.

## As performed.

## After-Notes as written.

## As performed.

## Abbreviations.

Abbeviations are ametimes used in writing musick. A single stroke over or under a semibreve, or through the stem of a minum or crotchet, divides them into quavers, a double stroke into eemiquavers, and a triple strohe into demiseniquavers. Grouping the stems of zonums is sometimes practised.

## REMARKS

Appoggiaturas and After-Notes belong to the class of graces or ornaments of masick : they are not valued in the measures where they occur, but diminish the time of the note to which they are attached, in exact proportion to their own proper length, as minums, erotchets, quavers, \&c. When an appoggiatura precedes a pointed note, it assumes twice its own value; and therefore reduces the time of tho pointed note to one third of its real value. Appoggiaturas always require force in execution, bcing on the strong or accentcd part of the measure: After-notes, on the contrary, as they occur on the weak part, should be more lightly and delicately touched. These graces add very much to the richness of melody ; give greatcr variety to harmony, and are frequently of as much importance in a composition, as the principal note. Notes of syncopation begin on the weak, and end on the strong part of the measure : they differ from appoggiaturas by being valued in the measures, and by constitusing a part of the radical harmony.

Tho Pause or IIold, as the terms indicate, may be used as a sign of continuation or of suspension. When the word or syllablo cannot be prolunged with propriety, it denotes silence: see the word "Victory," the last time it occurs in the "Dying Christian." In the tune "Cainbridge," on the word "Father," it indicates a prolonged swelling and diminishing of the sound; and sometines the note marked by the pause should be drawn out and gradually diminished to extreme lightness, dying away upon the ear as if heard from a distance.In ancient psalm tunes, the pause is used to denoto the cadence at the end of cach line of the poctry. When placed over a double bar, or between notes whero no rest is inserted, a discretionary rhetorical pause is intended.

Cadences, rests, and double bars, arc signs of musical punctuation, analogous to the points in language. They afford to the singer an opportunity of supplying the breath, and when care fully attended to, enable him to exccute musick with easc, propriety and effect. Cadences are variously formed, and are morc or less perfect, according to the degrees of satisfaction produced by them. Ilence, a knowledge of their nature becones necessary to the vocalist, in order that he may apply to them grcater or losser degrecs of emphasis in developing the ideas of the composer,

together with the common one. For a moro perfect knowledge of the scales, sce Recitation I, and Remarks, Class II, p 20.

## Class Sicomy.

## RECITATIONI.

## OFSCALES,KEYS, ANDMODES

A gradual succession of fixed sounds, containing five tones and two sewitones, arranged in a proper form, constitute the diatonick scale of musick.

There are two forms of this scale; the one is called the major mode of the scale, and the other the minor mode. In each mode there is one principal or governing note, on which the scale is built; this note is denominated the tonick, or key note: it is always the last note in the base, and is called Faw in the major, and Law in the minor mode.

The arrangement of the notes with respect to the places of the semiIones, constitutes the principal difference in the two modes.

If a series commence with $C$, the semitones will be found from the third to the fourth, and from the seventh to the eighth degrees; which are the proper places in a major scale; and as the same is not true of a series commencing with any other letter, C is the ouly natural tonick in the major mode.

In a series commencing with A , the interval from the second to the third, and also from the fifth to the sixth, is a semitone, which are the proper places in the minor mode; and as that would not be true of a series commencing with any other letter, $A$ is the ouly natural tonick in the minor mode.

The terms, major mode and minor mode, are used with reference to the third degree upward from the tonick. If the interval consist of two tones, it is a greater or major third, and the mode is on that account deuominated major; but, if the interval consist of one tone and one semitone, the third is a lesser or minor interval, and the mode is denominated minor.

The scale of the major mode is the same in its ascending and descending form; but in the minor mode, the ascending scale has the sixth and
seventh degrees raised a semitone by accidentals; in the descending scale, they remain unultered.
By dividing each tone of the diatonick scale into semitones, a scale is formed consisting of semitones only, which is called the chromaticle scale. This division of tones is effected by the use of flats and sharps, and by means of this division scales similar to those of C and A may be formed on any letter, by altering the places of the natural semitones, so that each letter may become a tonick letter: thus, twelve transpositions may be obtained, six by flats and six by sharps.

## QUESTIONS.

What constitutes a diatonick scale? What mnst be contained in them? How many forms of the scale? What called? What is the principal note of a seale called? By what rule found? By what syllable called in the major mode? What in the minor? How do the modes differ? Where found in the major mode? Where in the minor? Which is the natural tonick letter, major mode? In the minor? What degrec is referred to in using the terms major and minor mode? What constitutes a major third? What the minor? Whnt degrees are raised in the minor mode? Are they sharped in the descending scale? When the tones are divided, and a scale is formed of scmitones only, what called? How is the division made? What benefit is derived from the division? How many transpositions may be oblained?

## REMARKS

The minor mode requires, that whenever the 7th of the scale ascends to the 8th, it should become sharp, as the proper leading note of the key; that being naturally a tone below the 8 th, requires an aecidental to raise it. The sixth is made sharp, to acconunodate Ue seventh, to prevent the harsliness between the sharped seventh and the sixtl. Thus in every ascending minor scale, two notes are altered from the signature, which are sharped by ehanging Faw into Fi , and Sol into Si ; but in the descending scalc, the seventh is deprcssed to accommodate thesixth, as the descending scale in its natural form is more congenial with the character of the minor mode, and the scale of the signature is not altered; the syllablcs, therefore, are not changed. The effects of these two modes of the scale are peculiar, and very different; the one, from its having the greater third, is well suited to excite and express the cheerful and animated emotions of hope, joy, praise, adoration, and thanksgiving ; while the other,
from its possessing the lesser third, is calculated to produce emotions of sorrow, grief, pity, \&c. and is used for subjects of prayer, contrition, tenderness, and compassion.
In the transpositions of the diatonick scale, those scales which are nearest to tho natural onte, are the nearest related to it, and the relation decreases as they recede from it ; both to the right and to the left. Each scale in the major mode, has a relative scale in the minor mode, formed with the same signature, but requiring accidentals to complete the ascending scalc. Twelve minor scales, therefore, can be formed, each of which will be situated three degrees
below the major scale of the same signature. In all transpositions of the scale by sharpa, the key or tonick is on the next degree above the last sharp in the major mode, or ncxt below, in the minor. When the scale is transposed by flats, the major key note is always four degrees below (or what is the same, five degrees above) the last flat. The minor key note is always situated three degrees ahove, or six degrees below the last flat, and has a sharp or natural on the next degree below it as the proper leading noto, or sharp seventh of the scale.

## RECITATION II.

OF PRINCIPAL NOTES, CHORDS, TRIADS, \&e.

The principal notes of the diatonick scale, are the Tonick, the Dominant, and the Sub-Dominant.
The note next in importance, is the Leading Note, or sharp seventh of the scale; it is always a major third above the dominant.
The note ncxt in order, is the Mediant, or middle note between the tonick and the dominant. The next is the Sub-Mediant, or middle note between the tonick and the sub-dominant. The other note in the scale is a sccond above the tonick, and is called the Super-Tonick.
The disfance between any two sounds, when one is higher in tune or pitch than the other, is called an Intcrval. They are distinguished by the terms Major and Minor, Flat, Sharp, and Perfect.
The two thirds are the most important intervals, and should be well understoorl, as the mode is determined by the third alone. Chromatick Intervals are diatonick intervals increased or diminished by a sharp or a 1lat, and have the additional epithet of Extreme.

Thrce sounds, combined at the distance of a third and a fifth from the lowest, form a Triad, which is called inajor or minor, according to the natarc of its third.

Procression, is a succession of triads, or perfect chords, which are confined to the scale of the original key, and only admit of the tonich, the dominant, and the sub-dominant harmonies, occasionally interspersed with the relative Tonick and its altending harmonics.

Those changes which are produced by the introduction of a new flat, sharp, or natural, either as an accidental or by signature, are termed Modulution.

## QUESTIONS.

What aro the principal notes of a diatonick scale? What is the next in importance? Whai distance from the domitant? What is the next note in order? Between what note found? The next note? Where situated? What is tho other note of the scale called? What is tho distance between two notes called? IJow are intervals distingnislicd? Which are tho most important? When diatonick intervals are increased by a sharp, or diminished hy a flat, what are they called? When thres sounds are combined, at tho distance of a third and a fifth, what called? What is Progression? What are those clianges called whichare produced hy the introduction of flats and sharps ?

## REMARKS.

The Tonick, or Key-Note, is that chief sound which governs all the others. Tho Dominant, or 5th ahove the key, is also a governing note, as it requires the tonick to be heard after it, in a perfect cadence in the hase. The Sub-Dominant, or fifth below the key, is likewise a kind of governing note, as it requires the tonick to be heard ofter it in the Plagal carlence.These three sounds are the radical parts of every scale, whether major or minor. The major third above the dominant is called the leading nole, or the note sensible, because it learls yon to the key or tonick, which is always a semitone ahove it; in the minor scales, therefore, it requires an accidcutal slarp or natural. The mediant varies with the mode, being tho greater third in the major, and the lesser third in the minor mode. The sub-mediant also varies with the mode, beins the greater sixth in the major, and the lesser sixth in the minor mode.The mediant in the minor mode is the relative major liey-note, and the sub-mediant in the major mode is the relative minor key-note.

The intervals aro distinguished by the terms major and minor, flat, sharp, and perfect.The $2 \mathrm{ds}, 3 \mathrm{ds}, 6$ ths, and 7 ths, aro called Major or Minor, according to the number of semi tones included between the extremes. She Octave, Four'h, and Fith, are ealled Perfect, beeause they never change from major to minor, (or the reverse, but have the terms sharp or flat when altered a semitone higher or lower. All chromatick intervals are discordant; but they are used in harmony by license.

The introduction of a newf flat, sharp, or natural, as it alters the place of one of tho semitones, changes the key, and creates a new tonick. In common psalm tuncs, such changes are very frequent. Yct, the effect is generally momentary, as the character of the original key is not destroyed, hut continues predominant. In such cases, the ehanging of faw into fi, sol into si, and mi, when flatted, intofaw, will be a guide to correct intonation. The sixtli and seventh of the minor mode may bo sharped in that way; and in many chromatick passages, this method will perhaps be found most practicable.

## EXAMPLES.

## Notes of the Scale.

Triads.
Major. | Minor. | Diat'k disson't. | Chromat'k dissont. | Altered Triads.

Triads are consonant or dissonant : consonant, when they consist of a major and a minor third; and dissonant, when formed of two major or two minor thirds, The lowest note of a Con*onant Triad, is called the Radical Base, or root of the chord. There are sir consonant, two dissonant, and two altered Triads; but the roots of the dissonant and altered Triads are not so easily found.

## Harmonies.

Thus, the scales of C, G, and F, major; A, E, and D, minor; are intimately connected with, and mutually dependant on each other. Every other scale has its own attendant and relative harmonies likewise. The måor or minor of the same siguature, is Principal; the attendant keys of each are Subordinate, and require another flat or sharp to complete their scales.

## RECITATION HIS.

of Characteristick notes, modulation, f clef, rules for determining the key, \&e.
The leading note and the sub-dominant are the characteristick notes of every scale. They become particularly important in occasional modulation, as the new Key is to be found by their assistance; for by one of them, every scale, whether major or minor, may be known, and its tonick immediately ascertained.

In sharp signatures, the leading note is a species of index, which points invariably to the next degree abore, as its major tonick, and is always the last sharp in the major mode.

In flat signatures, the sub-dominant is also a species of index, which points invariably to the fourth degree below, as its major tonick; it is always the last flat in the major mode.

In the minor modes, when the signature is less than four flats, or four sharps, the sub-dominant is always one of the natural notes, and, therefore, is not so apparently a characteristick of the key; consequently, in those signatures of the minor mode, the leading note is the only certain index by which the new key is to be found.

In the signature of one flat, minor mode, the leading note is known by the accidental \# on C, which is the sharp serenth in the scale of D , the relative minor of F major, with the same siguature. [See Ex. No. 1.] In the signature of two flats, minor mode, the leading note is known by the accidental \# on $\mathbf{F}$, which is the required accideutal in $\mathbf{G}$ minor. [see Ex. No. 2.]

When the signature is three flats, the leading note is known in the minor mode by the $\frac{7}{7}$ on $B$, which is the sharp seventh of $C$, the relative minor of Eb major. [See Ex. No. 3.] In the siguature of one sharp, minor mode, it is distinguished by the accidental $\#$ on D , the proper leading note to the key of $E$ minor. [See Ex. No. 4.]

In the signature of two sharps, the leading note is known by the ac-
cidental \# on $A$, the proper leading note to the key of $B$ minor. [Sce Ex. No. 5.] When the signature is three sharps, it is distinguished by the accidental \# on E, which is thereby made the sharp seventh to $F \#$ minor, and is the required accidental to complete that scale. [See Ex. No. 6.]

Note. In ail the above cases, the required accidental would appear irregular if added $\omega$ the signature. Thus, when their effect is to elevate the sound of notes, if they cannot be added to the signature, it is certain that the minor mode prevails. It is obvious that the above, or any other scale, may be introduced by accidentals as well as by signatures; yct, to completo them, the note next below the si, would also require a sharp or natural, thereby making it the altered six of the ascending minor mode, and would be called Fi; when two adjoining letters, altered six of the ascending minor mode, and would be called Fi ; when two adjoining letters,
therefore, are raised by accidentals, it will generally be found that the mode is minor, and the therefore, are raiscd by accidentals, it will generally be found that the mode is minor, and the
key is situated one degree above the highest of the two altered letters. [See second measure of the base of Plympton.]
In all the flat signatures, major mode, the leading note, or sharp seventh of the new key, is a ң; see Ex. No. 7, where B দ is the leading note to the new key of C. In sharp signatures, major mode, the subdominant is distinguished by a $\ddagger$, and in modulation, requires the alteration of the sharp in the signature; see Ex. No. 8, where the F $\boldsymbol{y}$ is the sub-dominant to the key of C. It should be observed, that when the characteristick note of a new key is marked by a $\ddagger$ and follows a flat,
that it has the effect of a sharp, and is the leading note of the new key; when it follows a sharp, it has the effect of a flat, and is the sub-dominant of the new key.
When, by the insertion of accidentals, a modulation is produced, the syllables should be applied to the new key, precisely as they would have been if the new scale had been denoted by a new signature; that is, they must be so arranged as to make the key note faw in the major, and law in the minor mode; or it will be impossible to retain the impression of the key, or to perform the passage with true intonation.

The mode can be changed on the some tonich, by adding three sharps to the descending, or a single sliarp to the mediant of the ascending minor scale. The minor key note law, becomes the major totick faw, and the other syllables are changed accordingly. [Sec Ex. No. 9.]

A similar change can be effected by flats from the major to the minor. This change is produced by adding litree fition to the major mode descending, or a single flat to the mediant ascendiag, anit is called a modulation to the tonick minor; the major ley note faw, becomes the minor key note law, and the other syllables follow in their natural order. [See

Ex. No. 10.] These two last modulations are frequently found, but are generally denoted by a new signature.
\&
Another modulation is made from the major to the minor by sharps: when the sharp, on the sub-dominant major mode, is accompanied by a sharp on the super-tonick, the last mentioned sharp is the leading note of the new key: the mediant becomes the key note, minor mode; and the added $\#$ is the required accidental in that scale. [See Ex. No. 11.]

Another modulation is made from the major to the minor by flats: thus, when the flat on the leading note, major mode, is accompanied by a sharp on the key note, the key is raised one degree, and the sharped key note is the required accidental of that minor scale. [See Ex. No. 12.]

Wheu the flat on the leading note is accompanied by a flat on the mediant, the flatted mi becomes the key note, and must bc called faw; the flatted mediant becomes the sub-dominant of the new key, and the mode continues major. When by this modulation the mode is changed to the mivur, as is sometimes the case, the key is raised a fifth, aud the former dominant becomes the minor key note. [See Ex. Nos. 13 and 14.]

[^0]
## REMARKS.

Every major scale has two other major scales immediately connected with it, which aro the new sub-dominant major mode, and is called Faw, the change extending to the other syl. called attendant keys; one is formed by ądding a sharp to the signature, by which the key is raised a fifh, and the former dominant becomes the new tonick: the other is furmed by adtling a flat to the signature, by which the key is depressed a fifth, (or what is the same, raised a fourth, and the former tonick becomes the dominant to the new key. These two modinations occur more frequently than any others, if we except those changes which are made from the major key to its relative minor, and from the minor to its relative major; and when either of them take place, the other must follow to restore the original key. In the first case, the sharpod sub-dominant becomes the new leading note, major mode, and is called Mi; and all the other syllables are changed accordingly : in the other, the flatted leatling note becomes
lables as before, so us to marke mode, and is called Faw, the change extending to the other syl-
$\Lambda$ s the degrees and intervals of the scale become strongly associated in the mind of the performer, with the names which he is accustomed to apply to them; the best method of solmization, when the modulation is continued through iwo, three or more measures, is to change the whole order of syllables as above:-that is, to apply them as we should do were the signature changed. Modulations, however, will sometimes occur, in which the key changes at evcry step of the progression, and that facility cannot be afforded to the vocalist. In such cases, the substitution of an open vowel sound, as of $A$, in ah, or its broader sound as in aw, will probably be found easier than the application of syllables.

## GENERAL OBSERVATIONS.

By an attentive perusal of the preceding pages, all the difficulties of the art, so far as regards he reading of musick, may be overcome : the executive part is much more difficult of attainment, and can only be acquired by patient and persevering practice.
In order to become a good performer in musick, it is of the greatest importance that we begin aright; hence the advantages which result from the instructions of a competent Teacher.
Every thing in musick requires regularity, precision and accuracy, and the ear detects the most minute variations. The most common defects, (and those which make up the bad singing which so frequently prevails, are, false intonation upon some of the degrees of the scaleImperfect Time, and a disregard of the rythmical construction of the musicl-Inattention to Cadences, Rests, and musical punctuation generally. - To these may be added a defective Respiration, producing great inequality in the force of the voice. The quality of the tone of the voice, likewise, is frequently vitiated by varying the position of the vocal organs while sounding upon the same note-as, by gradually closing up the parts of the mouth while dwelling upon the same note, or word, which, in the last case, produces a false pronunciation.We might extend the enumeration to other particulars, bat shall only mention Indistinct Ariculation, accompanied by a bad pronunciation and a very great deficiency in Accent, Emphasis, and the most of those qualities which give Expression to musick. In the study of musick we run onward too fast : every step of our advance is hurried, and consequently our performances are very imperfect.
To those who have but litte time to devote to the study, and yet wish to acquire sufficient knowledge of the art to enable them to join in the musick of the sanctuary; we would sayLearn the first principles-and sing all tunes well by note, if you would save time, and render the musick of the church effective to edification.
To be successful in the study and practice of musick, we must enlist and bring to our aid, the same patient, persevering, and investigating dispositions and resolutions of mind, which are necessary to the attainment of other useful knowledge. A habit of measuring time with exactness must be formed-the intonation upon the degrees of the scale must be rendered familiar and perfect-the cultivation of the voice as to its quality, must not be neglected-syllables too, must be distinctly articulated, and words must be forcihly enunciated, correctly accented, and naturally emphasized. And, although our first attempts may be attended by a kind of mechanical stiffness, and a forced and unnatural mannor, seemingly inseparable from the course herein recommended; yet practice will render every thing easy and habitual, and the course herein recommended; y
the benefits will then be apparent.

The legitimate effects of sacred musick are to tranquillize the mind, to sooth the passil soften the heart, and fit us for devotional exercises. It is much to be regretted that suct fects are so seldom producod, and that Christian auditories should so frequently be pa: with false intonation, bad harmony, and tones of voice devoid (through a want of culture, those peculiar musical qualities which are requisite to excite agreeable sensations. when to such palpable defects in the musick are joined an indistinct utterance of the words, a monotony which scarcely admits of any distinguishable accent-to say notbing of em sis-when expression is entirely lost sight of, and feeling, either upon the subject oi the wi or the musick, is encased in insensibility, religious or moral effects cannot reasonably be pected to ensue.
By attending to the formation of the different vowel sounds, and afterwards connecting sonants with them, as mentioned in the directions, page 7 , the pupil will have acquir, knowledge of the principle; which, if followed out, will enable him to sing with distinc ticulation: and placing the voice as therein directed, will give to it a breadth, fulnesis richness of tone, and bring the organs into a proper position to execute with ease, correct and rapidity. With regard to the quality of tones, the language of nature must be studir We never mistake the accents of joy for those of grief, or the notes of exultation and triu for those of sorrow or despair; and the thousand intermediate degrees of feeling that are ; festel between those wide extremes, find an expressive utterance in the soul-moving ton e human voice the human voice. This natural language of tones conveys meaning without words forms the basis of all true expression. Discrepancies sometimes happen between the rh cal and musical accents in Psalmody, which require attention ; in such cases, musica cent must give way to that of language, yet it should not be entirely sacrificed. In em sizing, the intelligence of the performer will be called into exercise, to discriminate and on the important word, and enforce it by a suitable effort of the voice, so that the full and meaning of the sentenre sholl be conveyed.
But after all the direrections that can be given, and all that science can accomplish, tos with all the ability that nature can furnish; there is a spiritual qualification to be sough from Him, who alone can enable us to sing with true devotion of heart.

For other exercises in chromatick modulation, the reader is referred to the chorus "Ac ed is the glorious work," "Upton," "Tcmpest," "Kilmore," and various other pieces s body of the work.
agnifies in, for, at, with, dec.
agio, with a slow movement
la Capella, in the style of church musick.
lihitum, at pleasure.

nier Terour, high tenour, for the highest male voices. japo or D. C., close with the first strain.

Del segno, from the sign.
Diminuendo, Dim, or $\longrightarrow$, witlia decreased sound. Do!ce, tenderly or sweetly.
Dirge, a piece composed for funeral occasions,
Duetto, Duet, or Duo, musick consisting of two parts.
Duetto, Duet, or Duo, musick consisting of two parts.
Divoto, in a solemn and devout manner.
Diatonick, a name given to the natural series of notes.
Dominant, the note a fifth above, or fourth below the tonick Enharmonick, a name for the quarter tone.
Expressivo, with expression.
Expressione, in an expressive manner.
E, and, as Moderato e Maestoso, moderate and majestick.
Forte, loud.
Fortissimo, very loud.

## Fine, the end

Forzando, or $F$. Z., to be struck with force.
Falsetto, changing the voice from tenour to alto.
Full, with all the voices and instruments.
Grazioso, graceful; a smooth and gentle style of execution. Grave, slow and solemn.
Giusto, in equal, steady, and just time.
Glee, a varied vocal, sccular composition, in three or more parts. Interlude, an instrumental passage between two vocal passages. Interval, the distance between any two sounds.
Larghetto, quicker than Largo.
Leading-note, the major seventh above, or the minor second below the tonick.
Largo, the slowest degrce of movement.
Lento, slow.
Legato, to be performed in a connected and graceful manner. Lamentevo'e, in a melancholy style.
Letado, with increasing slowness.
Maestoso, with fulness and grandeur of expression.
Mezra voce, with a medium fulness of voice
Moderato, between Andante and Allegro.
Moderato et pomposo, in moderate time, and with grandeur of expression.
Orchestra, the place or band of musical performers.
Oratorio, a composition in dramatick style.
Obligalo, indispensable.
Organo, for the organ.

Overture, introductory to an oratorio.
Prims, first or leading part.
Piano, or Pia, soft.
Pianissimo, Pianis, or PP. very soft
Poco, little, somewhat.
Pomposo, a style grand and dignified.
Presto, quick.
Prestissimo, very quick.
Pizzicato, with the fingers instead of the bow.
Prelude, a short introductory movement.
Perpendosi, a gradual decrease of time to the last note, and a dinninution of tone till it is entircly lost.
Piu, a little more.
Quartetto, four voices, or instruments.
Quintetto, five voices, or instruments.
Recitative, a sort of musical speaking.
Soave, agreeable and pleasing.
Soprano, the treble or principal melody. The Air. Secundo, the se ond part.
Soto voce, middfing strength of voice.
Siciliano, or Siciliana, slow and gracefully.
Solo, designed for a single voice or instrument.
Suli, a single voice to each part.
Staccato, distinct and emphatick.
Spirituoso, or Conspirito, with spirit.
Subito, quick.
Symphony, a passage te, be executed by instruments. Sempre, throughout, as Sempre piano, soft throughout.
Sosteruto, hold tie notes their full lensth
Tonich, a term nearly synonymous with key-note.
Trio, a composition of three parts.
Tulfi, all, or altogether, as, all see chorus.
Tacit, be silent.
Turdo, slowly.
Tempo, time as marked; as a T'empo, to the original time
Tasto, or ''asto Solo, no chords, or none other than unisons.
$V i g o r o s o$, with energy.
Vivace, in a brisk and sprightly manner.
Veloce, quick.
Verse, one voice to a part.
Volli, turn over.

Creation smiles through all her tears (Ten thousand sparkling drops of dew, His head the lofty mountain rears, To meet the earliest sunbeam true: So shall I smile amid my wo,
When sorrows drown my weeping eyes; So shall my bosom learn to glow,
If thou, my glorious Sun, arise!

## 3

Dark as the world's unfashion'd face, In ancient night's primeval reign, Till thou the mournful shadows chase Must this poor sinful breast remain: But he who leads the morning stars, And kindles up the eastern skies, Himself, to dissipate my cares, The day-star of my life, arise !

660 Sing unto the Lord." [ANTEEM.]

The symphonies in this Anthem have been omitted, believing that it would be more convenient and useful without them. The passages in unisons have been extended to include all the parts, and some little variations have been made in the application of the words.
